\*The starred zip codes appear to have more capacity than children needing the service. The reasons for this are: 1) There are few resident children, but service capacity may address children in adjacent zip codes; 2) the services are on a college campus or a business site where there are no resident children; or 3) over a period of time, service capacity has grown but the population of children has changed.

---

<sup>1</sup> These numbers are calculated based on the results of the Los Angeles County Health Survey (2012), which includes questions about the use of child care and development of families with children ages 0-5. Percentages used to calculate numbers are: 29 percent Family Child Care (FCC); 36 percent center-based; and the remaining percent are applied to the use of license-exempt care.

<sup>2</sup> Licensed capacity is derived from the Community Care Licensing database. It includes both subsidized and un-subsidized care. Birth to three year old capacity numbers in FCC are calculated based on a workforce study conducted by the Center for Child Care Employment in Berkeley in 2006.

<sup>3</sup> A surplus in capacity are indicated with a positive number; shortfalls are indicated by the minus (-) sign before the number. These numbers are obtained by subtracting the number of children likely to use either FCC or center-based care from the currently available supply.
